

Exercise 2: Cozy Cabins Website

Develop a responsive webpage based on a mockup!

Using the provided Illustrator mockup and image files, develop this responsive webpage to the best of your ability. Make one breakpoint for mobile users, and style the mobile version of the site as closely to the mobile mockup as you can.

Name your page file “cozycabins.html”. Place the images in your images folder, and your stylesheet in your stylesheets folder. Use only one stylesheet!

You will only be graded if you attempted the exercise or not—that means don’t be afraid to fail. If your attempt doesn’t work at all, that’s fine!

Hints:

- You can find pixel values, font sizes, font names, and colors in the Illustrator mockup files.
- You might need to use the CSS declaration “display: none” when dealing with the nav.
- Both fonts can be found on Google fonts.
- You might want to base your breakpoint width on the width of the mobile mockup.
